DETAILED ACTION

1. Claims 13, 15-19, 21-24, 26-35 and 38-42 are pending.

Claims 1-12, 14, 20, 25 and 36-37 are cancelled.

Continued Examination Under 37 CFR 1.114

3. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. 6. Claim 13 has been replaced with the following:

- A method for producing a mold by computer-aided design including a preliminary step in which body portions of the mold are broken down into elementary strata, followed by steps including manufacture of the elementary strata to form manufactured strata and reconstruction of the mold by superposing and assembling the manufactured strata, wherein the method comprises the steps of:

defining a fluid transport circuit in the mold;

breaking-down the fluid transport circuit into a plurality of elementary chambers as part of the break-down of the mold and during the break-down of the mold;

producing the elementary chambers in the manufactured strata during the manufacture of the manufactured strata; and

completely reconstructing the fluid transport circuit during the superposition and the assembly of the manufactured strata:

breaking-down an isolating circuit coupled with the fluid transport circuit into a plurality of elementary isolating chambers as part of the break-down of the mold and during the break-down of the mold;

producing the elementary isolating chambers in the manufactured strata during the manufacture of the manufactured strata, simultaneously producing the elementary chambers and the elementary isolating chambers during the manufacture of the manufactured strata;

reconstructing the isolating circuit during the superposition and the assembly of the manufactured strata, wherein the elementary isolating chambers are placed in fluid-tight communication, simultaneously producing the fluid transport circuit and the isolating circuit;

and combining the elementary isolating chambers of the isolating circuit to form a thermal barrier between the fluid transport circuit and side and bottom portions of the mold. - -

- 7. Claim 33, Line 1 has been amended as follows:
 - The term "The method of claim 32" has been replaced by term - The method of claim 13 --.
- 8. Claims 15-19, 21-24, 32 and 40-42 are cancelled.

Allowable Subject Matter

- 9. Claims 13, 26-31, 33-35 and 38-39 are allowed.
- 10. The following is an examiner's statement of reasons for allowance:

While Choi et al., "Design and Evaluation of a Laser-Cutting Robot for Laminated, Solid Freeform Fabrication", 2000 IEEE discloses producing a mechanical part by computer-aided design including a preliminary step in which body portions of the mechanical part are broken down into elementary strata, followed by steps including Application/Control Number: 10/530,504

manufacture of the elementary strata to form manufactured strata and reconstruction of the mechanical part by superposing and assembling the manufactured strata; breaking down the mechanical part into a plurality of elementary chambers as part of the breakdown of the mechanical part and during the break-down of the mechanical part; producing elementary chambers in the manufactured strata during the manufacture of the manufactured strata; and completely reconstructing the mechanical part during the superposition and the assembly of the manufactured strata, Shaikh et al. (U.S. Patent No. 5,847,958) discloses reconstructing fluid transport passages during the superposition and the assembly of manufactured strata and Sachs et al. (U.S. Patent No. 5,775,402) discloses a mold including fluid transport passages, none of these references taken either alone or in combination with the prior art of record disclose a method for producing a mold, including:

(Claim 13) "breaking-down an isolating circuit coupled with the fluid transport circuit into a plurality of elementary isolating chambers as part of the break-down of the mold and during the break-down of the mold;

producing the elementary isolating chambers in the manufactured strata during the manufacture of the manufactured strata, simultaneously producing the elementary chambers and the elementary isolating chambers during the manufacture of the manufactured strata;

reconstructing the isolating circuit during the superposition and the assembly of the manufactured strata, wherein the elementary isolating chambers are placed in fluidArt Unit: 2123

tight communication, simultaneously producing the fluid transport circuit and the isolating circuit;

and combining the elementary isolating chambers of the isolating circuit to form a thermal barrier between the fluid transport circuit and side and bottom portions of the mold",

in combination with the remaining elements and features of the claimed invention. It is for these reasons that the applicant's invention defines over the prior art of record.
